

Brand Guideline 2022

logo

— representation of the brand

minimum clear space

minimum clear space around the logo ensures visibility and clarity.

the OBB logo should be kept clear of other logos and design elements. The minimum clear space required around the logo is one letter "o" from the logo horizontally and vertically.

exceptions

there are some occasions and applications that there is no need, or it is very difficult, to maintain the minimum clear space. In these cases, there is no need to consider the white space around the logo.

you can see the exceptions here:

application icons

stamp

social profile image

directional signage

scale

the right sizes

minimum size

the minimum acceptable size refers to the smallest size that the logo is visible and eligible.

these are the minimum sizes for most used mediums; for any other applications make sure the logo size is visible and readable, and never loses its identity.

150 x 250	px		minimum for print
150 x 250	px		our brand pillars
150 x 250	px		minimum for ooh
150 x 250	px		our brand pillars
72 x 92	px		minimum for screen
72 x 92	px		our brand pillars

placement

how and where it goes

placement

placement refers to where we place the logo in a frame. in the case of the OBB logo, we prefer always to place it at the left-hand side of the frame/ page, whether this is at the top or bottom. in cases such as a video or TV commercial, or any kind of packshots, we can place it in the centre of the frame.

attention

it does not matter if we have rtl frame or LTR frame, or if we are using the arabic logo: We should always stick to the rule and not to change the alignment of the logo to right.

not to do

└ what you should not do

attention

these rules are used to guide our use of the OBB logo. by following these rules, anyone working with the logo can ensure they maintain its correct form and character, and its long-term association with the OBB brand.

exceptions

on vary rare occasions, we can make an exception to the rule, in terms of how the logo is used. for example: when we require a watermark for a video, we can use the logo in a transparent or screened form.

colors

└ primary and secondary

colors

the colors we see

primary

our color palette is simple and impactful, comprising light turquoise and four other main colors. These are the colors of both our identity, as expressed through our logos, and our entire Visual Identity System.

• RGB

website and applications use RGB color mode.

• CMYK

digital printing from Adobe CS programs uses CMYK color mode.

• PMS

spot printing, screen printing and embroidery use Pantone® color modes.

• Hex / HSB

video applications and websites use HEX color mode.

colors

the colors we see

secondary

secondary color provides more ways to accent and distinguish the brand. Having a secondary color is optional, and should be applied sparingly to designs.

attention

for each main color we have a shade and a tint. Both are based on a formula that minlges with the saturatuion and brightness of main color.

tints are lighter by decreasing 20 on saturation and increasing 20 on brightness.

shades are darker obtained by decreasing 30 from brightness and increaseing 20 on saturation.
